car4go (team3)

First sprint backlog
1. Implement backend logic of car share and rent
2. Implement the UI logic (navigation, click event, rendering, etc.)
3. Implement login/register and email authentication
4. Implement RESTful API used by above
5. Documentation on naming rules, interfaces and data format.

After first sprint, the functionality of car share/rent will be provided. Clear usable Restful API will be ready. Login by university email will also by provided. Users will see a list of existing car services and they can also post their services.

What's more, a set of naming rules, interfaces, data format will be defined. Future development will benefit from it.

Seperation of duty
Aihua Peng: Conduct entire frame design, documentation and backend implementation
Xiaokai Sun: Conduct database design and implement Restful API
Xiaofen Liu: Conduct page logic design and frontend implementation

First sprint owner
Aihua Peng (aihuap)
